CryoVation Announces Upgraded SureGas® System

FORT MYERS, Fla. (June 10, 2011) – CryoVation announces its upgraded SureGas System for providing unattended, medium to high pressure gas flow for end-user applications.

The SureGas System allows manufacturing to maintain a constant, uninterrupted gas supply at pressures exceeding bulk tank capability (for laser cutting, injection molding, etc.). The system prevents interruption in the gas supply that can result in lost productivity, reduced quality or even downtime.

The system utilizes CryoVation's PAC-1 (Pump Automated Control) Console, Cryogenic Pump and Vaporizer to pressurize a high pressure gas pack or reserve storage bank. The PAC-1 is PLC controlled and will automatically cool-down the pump and fill the reserve bank based upon pressure set-points. Built-in safety features protect the pump and system. Regulators control the desired flow of product to the customer's process.

CryoVation is a manufacturing firm specializing in innovative cylinder filling systems. The company, with locations in Florida, Indiana and New Jersey, specializes in whole-plant systems, system upgrades and a full line of equipment and parts tailored to the needs of the industrial gas, specialty gas, medical oxygen and beverage gas industries. For information about products, services and specialty gas training classes, contact CryoVation at (239) 337-1114 or info@cryovation.com. More information is available online at www.CryoVation.com.
