

FOR IMMEDIATE RELEASE

CryoVation Now Supplying Oxygen Calibration Gases

FORT MYERS, Fla. (Dec. 7, 2009) – To complement its medical oxygen filling systems and better serve customers, CryoVation is now supplying calibration gases for all oxygen analyzers.

With state-of-the-art analytical instruments and gravimetric blending techniques, CryoVation technicians consistently produce medical calibration gas standards accurate to +/- 0.1% with traceable to NIST. The company maintains an inventory of calibration gases for next-day shipments.

Calibration gas mixtures play a critical role in assuring that oxygen delivered to patients is pure and safe. Calibration gases must be very precise in order to assure the accuracy of gas calibration instruments, which are used to test each batch of oxygen prepared for patient use.

CryoVation manufactures a full line of medical oxygen equipment, including self-contained gas and liquid filling systems, bulk oxygen systems and trailer fill systems; and a complete array of racks, carts, valves, pumps, control panels and manifolds. The company also supplies FDA equipment and services, and liquid oxygen vehicle installation and service. The company, with locations in Florida, Indiana and New Jersey, specializes in compressed gas filling systems for all industrial and medical uses. For more information about products, services and FDA Compliance classes, contact CryoVation at (239) 337-1114 or info@cryovation.com. More information is available online at www.CryoVation.com.
