CryoVation Self-Contained Filling System Provides Control, Profits
Oxygen providers can see substantial savings by filling their own cylinders

FORT MYERS, Fla. (November 17, 2009) – CryoVation’s state-of-the art, self-contained cylinder filling system offers medical oxygen suppliers a way to decrease costs, increase production and manage their own inventory.

The CryoVation PPS-5000 is designed for high-volume filling without the investment of a bulk tank. Oxygen gas distributors can improve their profitability and cylinder asset control by incorporating this liquid-to-gas filling system in lieu of "cascading" or having their cylinders filled by outside sources.

Oxygen suppliers say the system has lowered their cylinder costs by 400 percent or more.

“The investment has substantially paid off for First Community,” said Ken Coombs of First Community Care, which uses the PPS-5000 in several U.S. locations. “Our cylinder costs dropped dramatically - from more than \$2.50 per cylinder to less than 50 cents per cylinder.”

The system can fill at a rate of 200 E-cylinders per hour, or 5,000 square cubic feet per hour (scfh). The PPS-5000 can be upgraded as needed by adding additional vaporizer capacity, all the way up to 15,000 scfh off of a bulk tank. The CryoVation system pumps from a standard liquid cylinder (45 gallon, 250 PSI or larger) to minimize product losses.

CryoVation manufactures a full line of medical oxygen equipment, including self-contained filling systems, bulk oxygen systems and trailer fill systems; and a complete array of racks, carts, valves, pumps, control panels and manifolds. The company also supplies FDA equipment and services, and liquid oxygen vehicle installation and service. The company, with locations in Florida, Indiana and New Jersey, specializes in compressed gas filling systems for all industrial and medical uses. For more information about products and services, contact CryoVation at (239) 337-1114 or info@cryovation.com. More information is available online at www.CryoVation.com.
