CryoVation Unveils the Fill-Free 1.0

Semi-automated pressure and fill system lets operators work “hands-free”

FORT MYERS, Fla. (Oct. 4, 2010) – CryoVation has unveiled the Fill-Free 1.0, an affordable and expandable semi-automated system for companies that want to incorporate “operator-freedom” filling technology into their new or existing equipment.

The Fill-Free 1.0 is a scaled-down model of CryoVation’s Fill-Free 5.0 fully automated control technology. The new system automatically monitors pressure and temperature and calculates final fill pressure, while also alerting the operator to vent, vacuum and fill completion. The system also has built-in safety features, including pump cavitation protection and over-pressure protection.

The system will be demonstrated this week at the Gases and Welding Distributors Association (GAWDA) annual convention in Hawaii.

CryoVation is a manufacturing firm specializing in innovative cylinder filling systems. The company, with locations in Florida, Indiana and New Jersey, specializes in whole-plant systems, system upgrades and a full line of equipment and parts tailored to the needs of the industrial, specialty, medical oxygen and beverage gas industries. For information about products, services and specialty gas training classes, contact CryoVation at (239) 337-1114 or info@cryovation.com. More information is available online at www.cryovation.com.
