## **CryoVation Unveils New Gas Control Panels**

FORT MYERS, Fla. (April 26, 2010) – CryoVation has launched an upgraded line of industrial and specialty gas control panels, with the first application in a new hydrogen filling system at Butler Gas Products Company, Inc.

The gravimetric gas blending panel is an upgraded design and was manufactured at CryoVation headquarters in Florida. “CryoVation’s reputation and ability sold us,” said Jack Butler, president of Pennsylvania-based Butler Gas. “They tailor made it for our environment here, installed it and trained us to how to use it - the total package.”

CryoVation has been a major supplier of cylinder filling control panels for the industrial, specialty and medical gas industries worldwide for the past 10 years. The new panels include various customer-selected options packaged in a sleek, chrome and gray curved-frame design with a baked powder-coated frame assembly.

CryoVation designs, manufactures and installs compressed gas cylinder filling systems for the industrial, specialty gas, medical oxygen and beverage gas industries. For more information about products and services, contact CryoVation at (239) 337-1114 or [info@cryovation.com](mailto:info@cryovation.com). More information is available online at [www.cryovation.com](http://www.cryovation.com). CryoVation has locations in with locations in Florida, Indiana, New Jersey and Colorado and a nationwide network of service technicians.
